

Reduce Phantom Power Waste & Save Money

Do you **unplug your electrical devices** such as cell phone and laptops after fully charging them? You probably don't know how much energy and money you're wasting everyday.

Phantom power is the **idle current that that flow from cords plugged into outlets** when the devices they are attached to like your computer, television, cell phone, etc. are in standby mode or powered off.

As per [The Environmental Protection Agency](#), most people have at least 20 to 40 electrical devices using phantom power in their home. This leads to wastage of money and energy.

Check out the **4 ways to stop power loss and save money**:

- 1) **Unplug your electrical devices** when you're not using them
- 2) Use gadgets to cut off computer peripherals for saving money
- 3) Locate the source of your power leak
- 4) Use a power strip to save energy with the flip of a switch
